SQL DEVELOPER

You develop our systems

We'll develop you!

SDL Group Services   **Chilwell**

What we do

We deliver national coverage across the board, in surveying, mortgage services, auctions, property management, lettings and estate agency. In all areas, our revolutionary spirit has the customer at its heart. The Data Management Team prides itself on the fact that no matter the size of the requirement, we will deliver the best solution available to ensure we *"Make It Better"* for our customers.

What we care about

Revolutionising our customers' experience is what drives us each day at SDL. We thrive on shaking up the industry and doing what it takes to make customers' lives easier and better. Because they deserve more, and we want to be the ones to wow them.

We believe our greatest asset is our people and by empowering them to make a difference our people can become the best they can be.

Your life as a Developer

Working as a SQL Developer within the SDL group the role will involve supporting and developing the database and associated applications. You will be responsible for developing and delivering projects on time, to budget and to specification. To support and develop the integration environments both internally and externally, liaising with other departments and the team to control the workload.

SQL DEVELOPER

.

What you'll do

- Create database objects such as tables, views, stored procedures, triggers etc.

- Participate in discussions involving the application creation and understand the requirements and provide the back-end functionality for the applications.

- Deliver and articulate results to key stakeholders.

- Configure and maintain database servers and processes, including monitoring of system health and performance, to ensure high levels of performance, availability, and security

- Ensure that all high usage and resource heavy queries are flagged up and apply the recommended changes

- Document your progress and suggest better ways of doing things.

- Building data transformations with SSIS, transferring data.

- Develop reports in SQL Server Reporting Services.

- Maintaining of the SSAS reporting Datamart Cubes.

- Provide system analytics, architecture and design.

- Ensure that Legacy code is optimized in accordance with modern methods.

- Demonstrate the ability o decipher a non-technical requirement and create a technical solution that is fit for purpose whilst assessing the potential impact and consequence of any solutions.

- Be the escalation point for any technical queries reported through the internal ticketing system.

Who we're looking for
